

This is ExxonMobil

ExxonMobil is the world's leading publicly traded international petroleum and petrochemical company. We operate globally under the names Exxon, Mobil, Esso and Imperial Oil. At 3.9 million oil-equivalent barrels a day, ExxonMobil is the world's largest non-government producer of oil and natural gas.

By taking a long-term approach, ExxonMobil is optimally positioned to capture a balanced portfolio of new, high-quality opportunities, including conventional, discovered undeveloped and unconventional resources. Opportunities are prioritized on a global basis and tested to ensure viability across a broad range of future business environments.

ExxonMobil participated in eight major project start-ups in 2008, with nine more anticipated in 2009. Beyond 2009, an additional 44 major projects are in various stages of project planning and execution. There are about 120 projects in the portfolio, including minor projects.

Global reach is a key competitive advantage of the ExxonMobil natural gas business. We have employees dedicated to sales and market development in almost all major and developing markets. ExxonMobil sells about 11 billion cubic feet of natural gas per day to customers in a variety of sectors including power companies and industrial users. Additionally, we manage more than 1 million barrels of natural gas liquids per day, generate a significant amount of power, and are a leading marketer of helium.
